

QTH1 Air-to-Water Inverter Scroll Heat Pumps

Electric heating and cooling optimized for efficiency and performance

Air-to-Water Inverter Scroll Heat Pump

QTH10035 to 140

A complete range from 35 tons up to 140 tons

Four-pipe benefits and operation

- Full capacity in heating-only or cooling-only mode
- Simultaneous heating and cooling mode using recovered energy
- Supports balanced or unbalanced loads in simultaneous heating and cooling mode
- Independent and dynamic control of both hot and chilled water temperatures

Exceeds efficiency standards

The Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump is designed to meet tomorrow's efficiency standards today. Delivering performance beyond typical efficiency levels, this heat pump boasts an integrated part load value (IPLV) efficiency of up to 20.01 under Air-Conditioning, Heating and Refrigeration Institute (AHRI) conditions. This exceeds stringent regulatory requirements through an optimized combination of efficiency-enhancing technologies from Johnson Controls.

- **Direct current (DC) inverter technology** provides variable capacity control and allows the heat pump compressors to operate more efficiently across all cooling load and ambient temperature conditions versus constant-speed heat pumps that use a step unloading design
- **Electronically commutated (EC) fans** use more efficient motors and better aerodynamics to improve overall system efficiency and sound performance, particularly in part-load conditions. At reduced ambient temperatures, the head pressure control varies fan speeds to optimize the system efficiency and ensure reliable operation. This combination of variable-speed compressor and fans delivers a displacement power factor of up to 0.93, lowering electricity costs
- **High-efficiency brazed plate heat exchanger** uses less refrigerant and transfers heat from the liquid to refrigerant more efficiently to provide excellent heat transfer performance in a compact design. This also results in a lower water-side pressure drop which allows the use of smaller pumps to further reduce building power consumption
- **Dual circuit design** enables the entire heat transfer surface area to remain active at part load, delivering exceptional performance all year
- **Simultaneous heating and cooling version** balances heat intelligently through the building, conserving energy and moving it to where it's needed. Excess heat is rejected through the coils when not needed, or captured through them when more heat is required. The setpoints for both loops are controlled at all times for maximum stability and performance

Performance without compromise

The Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump is a no-compromise solution for a variety of climates and locations. Built specifically to deliver better performance through a wider operating envelope, this heat pump can maintain efficiency in a variety of conditions without kits or add-ons – up to 118°F ambient in cooling mode and down to an impressive -13°F ambient in heating mode. The applicability of an air-to-water heat pump is dependent on its ability to deliver sufficient heat output when it's cold outside. The QTH1 excels in this area, offering the widest operating map to deliver as much as 20% more heating capacity at low ambient operation.

With the smallest installed footprint across the widest capacity range, this heat pump is also the perfect solution for high performance in smaller spaces. Installation is simplified with a compact size that permits forklift loading and a modular configuration allows units to be arranged in varying footprints to fit different space requirements. This modularity means capacity can be increased incrementally as buildings are constructed or spaces are occupied. And if maintenance is required, other modules in the system will continue to operate, helping to reduce downtime and loss of capacity.

The coefficient of performance in simultaneous heating and cooling mode (COPshc) tells you just how efficient a heat pump can be when the work energy of the cooling process can be recovered and reused for heating.

$$\text{COPshc} = \frac{(\text{Cooling capacity} + \text{heating capacity})}{\text{Electrical power input}}$$

The QTH1 exceeds COPshc 8 – compare that for efficiency

We want to ensure our neighbors are comfortable too – even in retrofits. That's why our systems offer three levels of sound performance. If requirements call for sound reduction beyond our standard low-noise levels, an optional Ultra Quiet Kit can further reduce sound power by an impressive 5dBA, providing one of the quietest units available.

The proof is in the numbers

- IPLV = 20.01
- EER = 10.2
- COPshc = 8.1

The QTH1 is at the top of its class

Advanced control made easy

Comfort, productivity and up to half of the energy used in your building – these are all factors affected by how your heat pump operates and how it interacts with other components in your HVAC/R system. To help maximize efficiency and keep you in control, the Quantech QTH1 comes as standard with integrated advanced controls and communication technologies. This technology allows the equipment to connect seamlessly to building controls, such as our world-class Verasys system, where enabled equipment can self-identify and interoperate.

Verasys provides a plug-and-play experience, with no programming or commissioning tools required. Remote access over a secure internet connection and alarm notifications via email or text are possible through Verasys. The user-friendly graphical interface provides easy access to critical equipment and facility information to help minimize the risk of unplanned downtime and costly repairs. Verasys also provides enhanced energy efficiency control.

The key to this efficiency is demand control, where Verasys routes the energy requirements of a room or space to the heating and cooling equipment – matching the demand side and the supply side to provide greater overall energy efficiency.

In addition to Verasys integration capabilities, this model provides added flexibility with standard BACnet MS/TP, Modbus RTU or N2 connectivity for communication with virtually any building management system. This advanced, embedded control capability also allows multiple heat pumps to be connected and monitored through a single controller. The controller features a touchscreen display that has an easy-to-use, web-style interface and intuitive navigation for easy access to operational data. Information can be displayed in multiple languages and setup is very easy.

Plug-and-play experience

A history of **reliability**

When your reputation is at stake, count on efficient, reliable cooling and heating solutions from Quantech to lower costs and maximize uptime with dependability. By stocking locally, quick shipment to North American locations is possible. And with our units shipping as a complete package, everything arrives at the same time. We also offer a variety of standardized, locally stocked parts to ensure our systems continue to provide maximum uptime.

With the Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump, we're building on our legacy of cooling solutions and technology leadership. We judge success on real-world experience – not theoretical findings. We also use DC inverter technology proven over 30 years of use.

Every QTH1 heat pump is subjected to a Highly Accelerated Life Test (HALT) during the design product development stages. This testing simulates a variety of extreme conditions to ensure long-term operational reliability and quality.

- **Decades of extensive air-cooled expertise** is backed by proven components used in a variety of conditions in installations across the globe
- **Compressor management improves overall reliability** by balancing system operation time between each compressor
- **Smart logic controller** coordinates and optimizes units for off-design and part-load operation
- **Intelligent defrost** optimizes the sequencing of the defrost cycle and allows the remaining modules in the system to continue to provide heat, reducing interruptions
- **Compliance and certifications** include UL 60335 and AHRI certification

The Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump is a no-compromise solution that delivers high efficiency, unmatched flexibility, world-class sound performance, extensive control capability and long-lasting reliability. These highly optimized designs use advanced components and innovative thinking to provide the high performance that you expect from a leader in heat pump solutions.

Dedicated to sustainability

At Johnson Controls, we are dedicated to protecting the environment. This goes back to our founder, Warren S. Johnson, and his invention of the electric thermostat in 1885. It sparked a fundamental shift in the energy efficiency of buildings. Now, all over the world, our products and services empower customers and communities to consume less energy and conserve resources.

On our quest for the most sustainable and energy-efficient refrigerant, we have conducted extensive research, testing and evaluating:

- Capacity
- Efficiency
- Safety
- Availability
- Longevity
- Global warming potential (GWP)
- Ozone depletion potential (ODP)
- And other metrics

We are confident in our selection of R-454B for use in HVAC/R equipment with scroll compressors sold in North America. R-454B has the lowest Environmental Protection Agency (EPA) Significant New Alternatives Policy (SNAP1) approved GWP for unitary applications of all ASHRAE classified A2L refrigerants on the market today.

With a low GWP of just 466 and zero ODP, the R-454B refrigerant belongs in the HFO class, which eliminates ODP and reduces GWP.

The Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump with R-454B refrigerant complies with the HFC Phase Down plan to reduce greenhouse gas emissions. The physical properties of R-454B are similar to the R-410A refrigerant. In fact, most of the components designed for R-410A can be used with R-454B.

This new model uses 10% less refrigerant compared to products that use R-410A. In addition, it will maximize the use of existing components to cut waste. This heat pump is an eco-friendly offering whose operations work to protect our environment.

Safe and reliable

Toxicity and flammability must be addressed for all refrigerant options. Systems must be designed for new refrigerants and undergo long-term testing.

Efficient and sustainable

Future refrigerant choices must present equal or better overall performance values than current refrigerants. Energy efficiency is the ultimate priority to reduce the carbon footprint of HVAC products.

Available and affordable

Local availability at a reasonable cost is critical for building owners' bottom line.

78% lower GWP than R-410A
31% lower GWP than R-32
10% less charge than R-410A

Safety is our priority

The Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump is designed for safe operation. The new R-454B refrigerant was chosen with safety and low toxicity in mind.

R-454B has a 78% lower GWP value in comparison to R-410A and is classified in safety class A2L (non-toxic and difficult to ignite). This heat pump is equipped with refrigerant leakage detection sensors, additional ventilation and software management for leak warning messages. With multiple functional and reliability tests, quality assurance is enhanced.

To maximize safety, the system design has been verified by a third-party certification body which helps increase customer peace of mind. The customized components together with our advanced technology grant absolute confidence.

		Refrigerant safety groups	
Flammability	Higher	A3	B3
	Lower	A2	B2
	Difficult to ignite and sustain	A2L	B2L
	No flame propagation	A1	B1
			Lower
		No identified toxicity at concentrations ≤ 400ppm	Evidence of toxicity below 400ppm
		Toxicity	

Performance specification

Notes (two-pipe):

- Rated cooling performance: chilled EWT/LWT 54°F/44°F, outdoor air 95°F;
IPLV data is according to AHRI standard 550/590 I-P
- Rated heating performance: hot LWT 105°F, outdoor air 47°F/43°F (db/wb), the water flow rate used for heating is same as rated cooling condition

Notes (four-pipe):

- Rated cooling performance: chilled EWT/LWT 54°F/44°F, outdoor air 95°F
IPLV data is according to AHRI standard 550/590 I-P
- Rated heating performance: hot LWT 105°F, outdoor air 47°F/43°F, the water flow rate used is determined by the hot EWT/LWT 95°F/105°F
- Simultaneous heating and cooling: chilled LWT 44°F, water flow rate is determined by the water temperatures at rated cooling capacity, hot EWT/LWT 95°F/105°F, the water flow rate is determined by heating capacity and water temperatures.

High performance and flexibility

QTH1 operating envelope (two-pipe unit)

QTH1 operating envelope (four-pipe unit)

The Quantech QTH1 Air-to-Water Inverter Scroll Heat Pump offers up to eight independent circuits (QTH10140 has four modules, each with two circuits) to offer greater flexibility.

QTH10035

- 2 compressors
- 2 circuits

QTH10070

- 4 compressors
- 4 circuits

QTH10105

- 6 compressors
- 6 circuits

QTH10140

- 8 compressors
- 8 circuits

Various options

- Single VSD pump kits*
- Dual VSD pump kits*
- Low-sound kits
- Protection wire guard
- Single power connection (standard for QTH10070, QTH10105 and QTH10140)

* Refer to the YMAE Variable Speed Pump Kits brochure.

About Johnson Controls

Johnson Controls, a global leader in thermal management, mission-critical building systems, energy efficiency, and decarbonization, helps customers use energy more productively, reduce carbon emissions, and operate with the precision and resilience required in rapidly expanding industries such as data centers, healthcare, pharmaceuticals, advanced manufacturing, and higher education.

For more than 140 years, Johnson Controls has delivered performance where it really matters. Backed by advanced technology, lifecycle services and an industry-leading field organization, we elevate customer performance, turn goals into real-world results and help move society forward.
